Solar panels connected to the grid and sold for money

Overview

Can you sell solar energy back to the grid?

If you have installed solar panels or are considering residential solar investments, you may be wondering whether you can sell any excess energy back to the grid and earn compensation. This guide explains solar energy, net metering, and how to share surplus power with utility companies. It also covers energy compensation schemes.

Should Australians sell solar power back to the grid?

Australians increasingly benefit from selling solar power back to the grid through net metering Australia programs and various solar energy buyback schemes. Solar energy buyback refers to feeding excess electricity that your solar panels generate into the grid.

Can you get money from solar panels?

As a homeowner with solar panels, you may be able to receive payments for any excess solar energy you send back into the grid. Since 2019, the government have backed various schemes to help those who produce renewable energy, to benefit from sending their surplus into the national energy supply.

Can you sell excess electricity from solar panels?

Selling excess electricity generated by solar panels offers a valuable opportunity to reduce energy costs and generate additional income. By understanding net metering, feed-in tariffs, and other revenue streams like SRECs, you can maximize the financial benefits of your solar system.
