Solar power generation in Thailand

Overview

How much solar energy does Thailand produce?

Thailand's solar electricity production accounted for approximately 21.09% of total renewable energy generation and about 2.20% of the country's overall electricity production. These proportions remained relatively consistent compared to those recorded in 2022 (Table 1.2).

Why should Thailand invest in solar energy?

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its decarbonisation goals. While growth has been steady, rapid deployment is needed over the next decade to make longer-term targets attainable.

What percentage of Thailand's electricity is solar and wind?

Solar and wind power accounted for only 5.6% of Thailand's domestic electricity supply in 2024, BNEF estimates. BNEF's Net Zero Scenario shows that solar and wind can supply 60% of Thailand's electricity in 2050 while strengthening the country's energy security and eliminating emissions.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

Solar power generation in Thailand

Thailand's solar electricity production accounted for approximately 21.09% of total renewable energy generation and about 2.20% of the country's overall electricity production. These proportions remained relatively consistent compared to those recorded in 2022 (Table 1.2).

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its decarbonisation goals. While growth has been steady, rapid deployment is needed over the next decade to make longer-term targets attainable.

Solar and wind power accounted for only 5.6% of Thailand's domestic electricity supply in 2024, BNEF estimates. BNEF's Net Zero Scenario shows that solar and wind can supply 60% of Thailand's electricity in 2050 while strengthening the country's energy security and eliminating emissions.

To close this gap, Thailand is relying on more than just solar. Solar in Thailand's Energy Mix: What Lies Ahead?
Thailand's Renewable Energy and Climate Change Goals
Thailand's government isn't forsaking fossil fuels, however; quite the contrary. The Energy Ministry is moving forward with plans to field bids from independent power producers (IPPs) to add a lot more fossil-fuel power generation capacity. IPPs will be invited to bid for 8,300 MW of power generation capacity in 2019 in what is to be the fourth round. See more on solarmagazine BloombergNEF

BloombergNEF's Thailand: Turning Point for a Net-Zero Power Grid report finds that solar power has been the cheapest source of ...

Thailand renewable energy expansion is gaining speed with major solar investments, but outdated grids and policies pose key challenges to progress. Read here!

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its ...

Systems without PPA refer to independent power supply (IPS) producers who generate electricity for self-consumption or to provide electricity directly to other customers. In 2023, Thailand ...

Solar Power Generation 1.1 Thailand's Power Generation Statistics
In 2023, Thailand's power generation system generated 219,540.04 GWh, representing an increase of 7,792.66 GWh or ...

BloombergNEF's Thailand: Turning Point for a Net-Zero Power Grid report finds that solar power has been the cheapest source of electricity generation in Thailand since 2022 ...

Adding 32GW of new solar to Thailand's power generation deployment targets could cut power generation costs by as much as US\$1.8 billion.

Thailand renewable energy expansion is gaining speed with major solar investments, but outdated grids and policies pose key ...

Solar energy is slated to be Thailand's largest renewable energy source in the coming years. It will be critical in driving the country's energy transition and achieving its ...

Clean energy is no longer our future, it's already here. Thailand must act fast or risk falling further behind. Solar and wind are booming across the world, yet Thailand continues to ...

9 hours ago Thailand has launched the "Quick Big Win" energy initiative -- a nationwide fast-track policy aimed at reducing household energy costs, cutting carbon emissions, and creating ...
