# **South Asia Power Bureau Base Station**

**TELECOM CABINET**

**BRAND NEW ORIGINAL**

**HIGH-EFFICIENCY**

## Overview

---

What is South Asia subregional economic cooperation power system expansion project?

The South Asia Subregional Economic Cooperation Power System Expansion Project is building more than 200 kilometers of power transmission lines, as well as substations, along Kali Gandaki corridor in the Himalayas and Marsyangdi-Kathmandu route.

Should South Asia integrate its power grids and promote CBET?

South Asia, with its diversity of energy resources and consumption, presents many positive opportunities for integrating its power grids and promoting CBET. Both renewable and fossil energy sources are unevenly distributed, while electricity shortages and growing demand are pressing problems that need to be solved by energy policymakers.

Is an integrated South Asia power grid feasible?

Under an integrated grid, countries can be both energy producing and energy consuming at different times or seasons, depending on their energy supply and demand situations. While it will be challenging to implement, there are no reasons why an integrated South Asia power grid is not technically and economically feasible.

Why are interconnected power systems important in South Asia?

Dependable supplies of electricity are vital to fuel South Asia's growing population and economy. Interconnected power systems offer a number of benefits. They reduce the need to build reserve capacity in individual systems, create economies of scale to generate electricity with lower per-unit costs, and offer global climate benefits.
