

NKOSITHANDILEB SOLAR

Sudan solar panels solar power generation

Voltage range

636V-876V

Rated voltage

768V

Cell type

Lithium iron phosphate

Overview

Can solar energy be used in Sudan?

Research and projects on solar energy in Sudan have primarily concentrated on solar PV systems, with relatively limited focus on solar thermal energy. Nevertheless, there are some studies that have explored power generation using CSP technologies.

How many solar plants are there in Sudan?

The government has identified six additional sites capable of producing a total of 2197 MW, though no significant new installations have been recently initiated. As part of the Sunbelt region, Sudan possesses substantial solar energy potential. However, the grid-connected capacity remains limited to the 5-MW El Fasher solar PV plant.

What is the energy supply in Sudan?

The energy supply in Sudan is primarily derived from crude oil, hydroelectricity, biomass, and renewable energy sources such as wind, solar, and geothermal energy. As illustrated in Figure 2a, biomass is the largest contributor, accounting for 52% of Sudan's total energy consumption.

How much solar power will Sudan have by 2035?

Plans are underway to deploy 1200 solar pumps in West and North Kordofan. By 2035, the government also plans to establish 190 MW of solar PV home systems, 400 MW of solar pumping, 250 MW of rooftop PV systems, and 27 MW of PV-diesel hybrid systems. In wind energy, Sudan aims to achieve a total installed capacity of 1550 MW by 2035.
