

# The construction of new energy storage standards is accelerating

## ESS

## Overview

---

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems. What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Will China develop new energy storage systems between 2025 and 2027?

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

What is the new energy storage action plan?

The new action plan, grounded in the nation's dual carbon goals, aims to grow the national new energy storage fleet to 180 GW by 2027. It responds to the urgent need for flexible energy regulation amid rapid renewable energy expansion.

What is the energy storage plan?

The plan outlined 21 key measures, including scaling up energy storage applications in power generation and grid infrastructure, accelerating technological innovation, and improving standardization. It also emphasized talent development and enhancing international cooperation in the sector.

## The construction of new energy storage standards is accelerating

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

The new action plan, grounded in the nation's dual carbon goals, aims to grow the national new energy storage fleet to 180 GW by 2027. It responds to the urgent need for flexible energy regulation amid rapid renewable energy expansion.

The plan outlined 21 key measures, including scaling up energy storage applications in power generation and grid infrastructure, accelerating technological innovation, and improving standardization. It also emphasized talent development and enhancing international cooperation in the sector.

Standards for storage technology and products can support the commercial development of the storage industry. For that purpose, policies on standard system and ...

(2) Improve the network related performance of new entities. In response to the rapid development of new energy, electric vehicle charging infrastructure, and new energy storage, ...

China aims to add more than 100 GW of new energy storage (primarily battery storage,

excluding pumped hydro) by 2027, according to a new action plan presented by ...

To facilitate the progress of energy storage projects, national and local governments have introduced a range of incentive policies. For example, the "Action Plan for Standardization ...

Furthermore, Bian highlighted the ongoing efforts to "accelerate the improvement of the new energy storage standard system ...

Bian said the administration will further promote the orderly development of new energy storage technology, while vigorously supporting technological innovation, continuing to ...

Leveraging its dominant position in electric vehicles, lithium batteries and solar panel manufacturing, China is now strategically ...

The China New Energy Storage Development Report 2025 represents a major milestone in the institutionalization of NES planning and governance in China. By quantifying ...

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to ...

The China New Energy Storage Development Report 2025 represents a major milestone in the institutionalization of NES planning ...

Section 1 Accelerating the Development of New Infrastructure We will conduct planning to develop information-based, integrated, and innovation-oriented infrastructure to ...

On 15 July, national plans for energy storage were set out by the Chinese National Development and Reform Commission and National Energy Administration. The main

goals of ...

Bian said the administration will further promote the orderly development of new energy storage technology, while vigorously ...

Accelerating the planning and construction of a new energy system is an important condition and foundation for promoting Chinese path to modernization. The development of ...

Furthermore, Bian highlighted the ongoing efforts to "accelerate the improvement of the new energy storage standard system and strive to promote innovation in the new energy ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ...

The government's efforts to build a new type of power system with a gradual increase in the proportion of clean energy will further consolidate renewable energy's role in ...

KPMG China and the Electric Transportation & Energy Storage Association of the China Electricity Council ('CEC') released the New Energy Storage Technologies Empower ...

However, while the installed capacity is growing rapidly, new energy storage is still facing the problem of low utilization rate. There are currently four major revenue models for ...

Accelerating the planning and construction of a new energy system is an important condition and foundation for promoting Chinese path to modernization. The development of new energy ...

Accelerating the construction of a new power system is on the cards after a comprehensive strategy was released by China's National Development and Reform ...

Chinese companies are accelerating the construction of a new type of power system on the back of renewable electricity growth, spurring demand for smart grids and ...

Driven by the national strategic goals of carbon peaking and carbon neutrality, energy storage, as an important technology and basic ...

Fostering new business forms and models in the energy sector. China has optimized and integrated its resources for electricity generation, grid infrastructure, and load ...
