The inverter should use sine wave

Overview

Should you buy a pure sine wave inverter?

If yes, go for pure sine. Pure sine wave inverters come with smooth power output, device compatibility, and long-term safety which make them a must for serious setups—especially in solar, off-grid, or medical use cases. If you're researching inverters for home backup or solar systems, you've probably come across the term "pure sine wave inverter."

Why do you need a sine wave inverter?

The clean power produced by pure sine wave inverters reduces electrical component stress on your devices. Compressors, motors, and power supplies will experience lower wear and tear and ultimately prolong the life of your appliances and electronics. The long-term benefit most often outweighs the higher initial cost of the inverter. 6.

How much power does a sine wave inverter use?

The capacity of a pure sine wave inverter must cover the peak power (not the rated power) of all devices. For example, a refrigerator rated at 600 W may consume 1,800 W at the moment of startup. As a safety buffer, the total power requirement should be 1.2 times the sum of the devices' peaks. Voltage Requirements.

How does a pure sine wave inverter benefit a solar system?

Solar System Gains: Pure sine wave inverters increase solar panel efficiency by 10-12%, adding \$210/year in energy value for a 5kW system. Government subsidies and long-term investment returns
