Overview

How to connect solar panels in series-parallel?

How to connect solar panels in series-parallel: Let's say you wonder how to connect six solar panels together. There are two ways: you could create two strings with three panels in each or three strings with two panels in each. First wire solar panels in series. Each string will have a loose positive cable and a loose negative cable.

How do I connect multiple solar panels together in series?

How to connect multiple solar panels together in series: Connect the positive (+) cable of one panel to the negative (-) one of the next panel. The female MC4 connector marks a positive cable and the male MC4 is the negative. Continue with the rest until all panels are connected.

How to connect solar panels together in parallel?

In a large system, using parallel configuration becomes costly and complicated because the cable gauge increases greatly. How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box.

Should you connect multiple solar panels together?

If you're looking to increase your solar capacity, connecting multiple solar panels together is a great option. But should you wire them in series, parallel, or a combination of both?

This guide explains the differences, when to use each method, and how to wire them safely. What's the Goal of Combining Solar Panels?
