Transformer breaker for sale in Czech-Republic

Overview

What is a power transformer?

These power transformers are a key part of distribution networks and are designed for a wide range of applications, including block transformers for power plants and thermal plants, with capacities up to 120 MVA and voltages up to 145 kV.

What are the different types of power transformers?

These transformers include block transformers, line transformers and specialty transformers that are designed to meet the needs of various industries. In addition, our power transformers are optimized for maximum energy efficiency, thereby contributing to lower operating costs and minimizing energy losses.

What is a specialty transformer?

They are also ideal for specialty and furnace transformers that are required to power specific industrial processes such as rectifier systems. These transformers include block transformers, line transformers and specialty transformers that are designed to meet the needs of various industries.
