What is an uninterruptible power supply?

An uninterruptible power supply is a device that has the ability to convert and control direct current (DC) energy to alternating current (AC) energy . UPS is a battery backup for PC, when the power goes off the UPS kicks in and continues to supply power for some period of time to the particular system.

What is a single-phase online uninterruptable power supply (UPS)?

Our integrated circuits and reference designs for single-phase online uninterruptable power supply (UPS) help you design reliable and robust hardware with very low input and output total harmonic distortion (THD) and increased efficiency. Modern single-phase online UPS designs often require:

Why is a new concept important for an uninterruptible power supply?

In many applications, it is important for the supply voltage to be continuously available no matter what the circumstances. This isn't always easy to ensure. A new concept can provide an optimal solution for an uninterruptible power supply with an extremely compact design.

What is an uninterrupted power supply (UPS)?

The human desire to have a steady power supply for domestic and industrial purposes gave rise to an uninterrupted Power supply (UPS). Globally, the need and demand for computers, electronics, and other electrical devices are on the rise. These types of equipment required quality, high stability, and uninterrupted power supply.
