# Two 24v solar container lithium battery packs connected in series to convert to 48v

## Overview

---

How many 12V batteries are in a 48V 35 Ah battery pack?

For our last series example, below are four 12v batteries in series to create a 48v 35 AH battery pack. When connecting batteries in series: Never cross the remaining open positive and negative terminals with each other, as this will short-circuit the batteries and cause damage or injury. The other type of connection is parallel.

Why are lithium batteries connected in series?

Lithium batteries are connected in series when the goal is to increase the nominal voltage rating of one individual lithium battery - by connecting it in series strings with at least one more of the same type and specification - to meet the nominal operating voltage of the system the batteries are being installed to support.

How to wire lithium batteries in series?

Lithium batteries are part of our everyday gadgets like phones, laptops, and even electric cars, so knowing how to wire them in series is essential for any practical project. To wire lithium batteries in series to increase voltage, connect the positive terminal of one battery to the negative terminal of the next.

What happens if you connect two lithium batteries in series?

Two 12.8V-100AH lithium batteries connected in series becomes a 25.6V-100AH battery bank with 2560 watts of stored energy potential to 100% DOD. Connecting batteries in Series increases the battery bank voltage and total stored energy.
