Türkiye wind solar and energy storage integration

Overview

Does Türkiye have a solar power plant?

The facilitation of self-consumption-focused power plant installations in Türkiye has accelerated annual new installations, pushing solar energy capacity beyond the current 2025 target. Türkiye’s solar energy capacity doubled from 9.7 GW in July 2022 to exceed 19 GW by the end of 2024.

Are storage-integrated power plants possible in Türkiye?

While no grid-scale storage-integrated power plants are operational in Türkiye yet, the country has a robust pipeline of approximately 33 GW of storage-integrated wind and solar projects with pre-licensing periods extending until 2030. This strong investor interest highlights the potential of storage-integrated power plants.

Does Türkiye have a strong wind energy capacity?

In 2024, Türkiye’s wind energy capacity grew by only 6.5% (+770 MW), marking a significant slowdown compared to the peak annual additions of 1.7 GW in 2021.

Can Türkiye use untapped solar power to accelerate solar energy momentum?

Türkiye could utilize untapped capacities to advance solar energy momentum through floating, storage-integrated, hybrid and rooftop solar potential. The country has a pipeline of 33 GW in pre-licensed storage-integrated solar and wind projects, far exceeding the official 2030 target of 2.1 GW.

Türkiye wind solar and energy storage integration

The facilitation of self-consumption-focused power plant installations in Türkiye has accelerated annual new installations, pushing solar energy capacity beyond the current 2025 target. Türkiye's solar energy capacity doubled from 9.7 GW in July 2022 to exceed 19 GW by the end of 2024.

While no grid-scale storage-integrated power plants are operational in Türkiye yet, the country has a robust pipeline of approximately 33 GW of storage-integrated wind and solar projects with pre-licensing periods extending until 2030. This strong investor interest highlights the potential of storage-integrated power plants.

In 2024, Türkiye's wind energy capacity grew by only 6.5% (+770 MW), marking a significant slowdown compared to the peak annual additions of 1.7 GW in 2021.

Türkiye could utilize untapped capacities to advance solar energy momentum through floating, storage-integrated, hybrid and rooftop solar potential. The country has a pipeline of 33 GW in pre-licensed storage-integrated solar and wind projects, far exceeding the official 2030 target of 2.1 GW.

June 2025 - Türkiye continues to make significant strides in its transition towards a greener energy future. In this brochure, we provide an overview of the current structure and legal ...

Objective: Store excess wind and solar energy for use during low-production hours, supporting clean energy goals and economic benefits. Energy Storage Industries Association ...

T ürkiye is making significant strides toward its 2053 net ...

Objective: Store excess wind and solar energy for use during low-production hours, supporting clean energy goals and economic ...

Solar and wind power transition in Türkiye: An input-output analysis of growth, employment, and current account effects Abstract Türkiye ratified the Paris Agreement in 2021 ...

As of April 2025, Türkiye's total installed electricity generation capacity exceeds 118 GW. The country's three largest renewable energy sources-- hydroelectric (dam-based), ...

This study examines the recent development of solar and wind energy capacities in Türkiye in the context of current renewable energy targets and strategies.

This photo taken on Sept. 28, 2025 shows solar panels and wind turbines in Konya, Türkiye. Official data showed that Türkiye's solar power has doubled since 2021, ...

As a result of the agreement between Polat Enerji, T Dinamik Enerji, and Tegnatia EPC Solutions, the installation of Turkey's first energy storage facility integrated into ...

In parallel, energy storage technologies are becoming integral to Türkiye's green infrastructure. The country plans to expand battery storage capacity to 1 GW by 2025 and 10 ...

T ürkiye is making significant strides toward its 2053 net-zero carbon emissions goal by ramping up investments in energy storage systems according to Türkiye daily. The ...

According to the 2022 National Energy Plan, the government aims to increase the level of installed wind energy power to 29.6 GW by 2035. Türkiye's potential wind energy ...
