# **Uninterrupted power supply for Cape Verde s 5G solar container communication stations**

## Overview

---

Is re a suitable power supply for 5G communication networks?

Limited space and far few PV modules are required in 5G systems. Thus, RE is a desirable power supply for such communication networks. The RE sources to power individual SCBSs may face geographical issues.

Will 5G UDN increase energy consumption in 2026?

As a result, the operational cost of the system will rise, which is a significant concern of the mobile operators nowadays. It is expected that the 5G UDN network will increase the total network energy consumption by up to 150%-170% in 2026 ( Lorincz et al., 2019 ).

What are the technical challenges of microgrid enabled 5G mobile networks?

Technical challenges of microgeneration (microgrid) enabled 5G mobile networks Microgeneration (microgrid) is one of the alternatives to resolve the issues of conventional power backup sources. To make the microgrid resilient, it must be accurately designed.

What is a resilient microgrid power supply system?

Such a resilient microgrid power supply system for the mobile network may have a hierarchical structure of energy management controller, one top level, or may be called as the central controller and the other lower level.
