Phoenix Contact uninterruptible power supplies for AC and DC applications provide reliable protection against supply interruptions.

What is an ups & how does it work?

UPS units are emergency power supplies that ensure uninterrupted power delivery. In the event of a power surge or outage, the UPS takes over as the primary power source. This allows, for example, the saving of current projects and the safe closure of documents. A UPS protects hardware components from the negative effects of power surges.

What is the difference between a true online UPS & VRLA battery?

For more demanding environments, a True Online UPS provides seamless power with zero transfer time, pure sine wave output and continuous conversion to safeguard critical equipment. VRLA batteries are more cost-effective upfront but require more maintenance and have a shorter lifespan.
