How does solar energy generation work?

Solar energy generation follows a structured process to transform sunlight into usable electricity. This process involves several essential steps, starting with Photovoltaic (PV) cells within solar panels absorbing sunlight.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels.

What is solar energy?

Solar power is energy from the sun that is converted into thermal or electrical energy. Solar energy is the cleanest and most abundant renewable energy source available, and the U.S. has some of the richest solar resources in the world.

What is solar energy used for?

Solar energy is also used on a small scale for purposes other than those described above. In some countries, for instance, solar energy is used to produce salt from seawater by evaporation.
