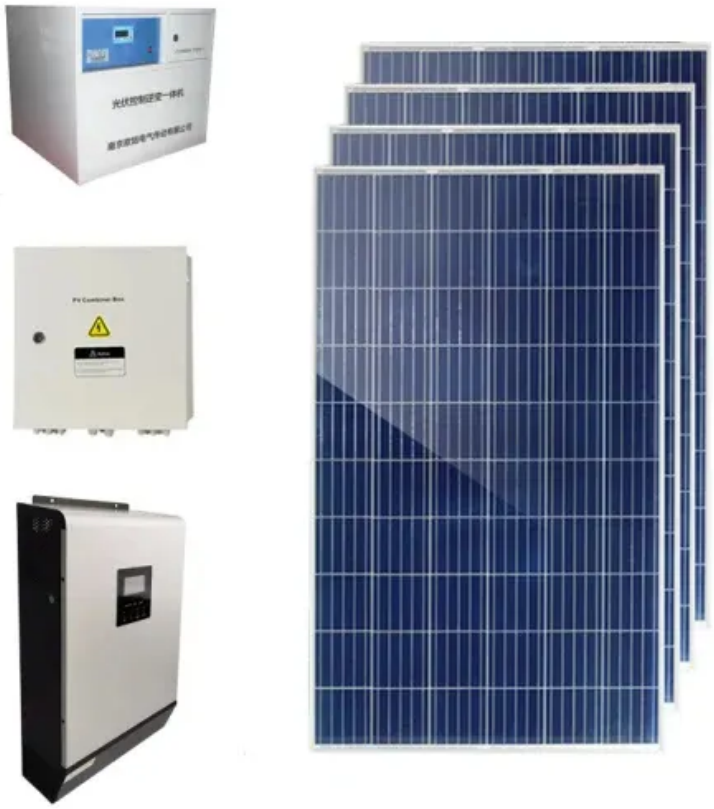
Victoria New Energy Site Energy



Overview

How much of Victoria's Electricity is renewable?

Currently, renewable energy accounts for just under 40% of Victoria’s electricity supply, with only four renewable projects completed in 2023. The Mortlake Hub represents a critical investment in the state’s long-term clean energy goals.

What will Victoria do about coal-fired power stations?

A balance of renewable energy generation and storage will be required to replace retiring coal-fired power stations and ensure Victoria’s electricity system is affordable, reliable, safe, and sustainable. Actions include: Building energy storage – like the Victorian Big Battery – to help provide reliable renewable energy throughout the transition.

How can Victoria achieve a successful electricity transition?

For a successful electricity transition, it is essential to skill, up-skill and train Victoria’s energy workforce, and have a supply chain that meets our growing energy sector needs. Actions include: Working with key stakeholders to strengthen local renewable electricity supply chains.

What is our vision for Victoria's future electricity system?

Our vision for Victoria’s future electricity system. Cheaper, Cleaner, Renewable: Our Plan for Victoria's Electricity Future outlines the actions we are taking to ensure our state achieves its renewable energy targets. The plan is built on 4 pillars: Creating jobs, skills and supply chains.
