# **What are the new energy base stations in North Macedonia**

## Overview

---

How does North Macedonia generate electricity?

North Macedonia has historically relied on hydropower for a significant portion of its electricity generation. The country has utilized its rivers to develop hydropower plants. There have been also efforts to harness wind energy, and several wind projects have been proposed or are under development.

Should North Macedonia accelerate the transition to renewables?

Like others in the region, North Macedonia must balance its need to rapidly accelerate the transition to renewables to secure its energy future with the need to ensure that future is one where both the country's nature and people thrive.

What if North Macedonia used its technical potential?

As we can see, if North Macedonia would use its entire technical potential, it would increase the generating power by 321%. North Macedonia has calculated a potential emission reduction of 30% by 2030. Greenhouse gas emissions in N. Macedonia are in 2016 around 11Mtons of CO<sub>2</sub> and in energy sector 7,66Mtons of CO<sub>2</sub> equivalent.

Will lignite mine be phased out in North Macedonia?

According to the Energy Strategy it is phased out in all three scenarios. It is being replaced by a 120 MW of solar photovoltaics on top of the now depleted lignite mine. North Macedonia adopted its first National Energy and Climate Plan (NECP) in June 2022.
