Overview

What can be tested in a battery test chamber?

Thermotron's Battery Test Chambers are designed to test all types of batteries, including lithium-ion batteries. Battery test chambers have numerous safety features built in to the test chamber to dea.

What is a battery charge & discharge test chamber?

The battery charge&discharge test chamber is a device specially designed for charging and discharging safety tests on batteries (such as lithium-ion batteries).This type of test chamber can simulate the extreme charge and discharge conditions that the battery may encounter in actual use to evaluate.

Do battery test labs care about chemistry?

The good thing is that battery test labs don't care what chemistry the batteries are so when a company has built sufficient testing capacity, it is able to keep working with other chemistries as they become available.

Why are EV battery test labs so important?

The proliferation of EV battery cell manufacturing plants and EV battery pack assembly plants is producing a corresponding boom in the construction of battery test labs. These are needed to verify that battery cells, modules, and completed packs all perform safely and provide the durability customers expect.
