**Which site is good for foreign
trade batteries**

Overview

Does China have a role in the battery industry?

The U.S. battery industry continues to adapt to a fast-changing global landscape, with trade policies, especially those involving China, playing a central role. As the world's dominant player in battery supply chains, China remains at the heart of ongoing debates over tariffs, national security, and industrial policy.

Which country exports the most battery cells in the world?

China accounted for 74% of the world's battery pack and component exports in 2023. That same year, China controlled nearly 85% of the world's battery cell production capacity by monetary value. Data source: United Nations Statistics Division, UN Comtrade Note: Excludes trade within regions.

How much battery material does China Import & Export?

China imported almost 12 million short tons of raw and processed battery minerals, accounting for 44% of interregional trade, and exported almost 11 million short tons of battery materials, packs, and components, or 58% of interregional trade in 2023, according to regional UN Comtrade data.

Which countries should consider a battery tariff in 2025?

At the beginning of 2025, important countries and territories to consider for battery tariffs included Japan (Panasonic), Korea (Samsung/LG), the EU, Turkey (Pomega), South Africa (Polarium), India, Malaysia (EVE), Thailand (Gotion), and Indonesia (CATL).
